AVSS™ ✦ Project
Automated Vital Statistics System

BIRTH CERTIFICATE CHANGES:

01-066   The LIST TO BE SENT suboption is now available at local registration districts only for hospitals that are not running on stand-alone AVSS installations.

01-083   The current year default has been removed from LFN ASSIGNMENT and the user must enter either the current birth year or the previous birth year.

01-094   New and revised warnings have been added to AMEND CERTIFICATE and EDIT CERTIFICATE to deter users from inappropriately amending certificates.

01-096   Births can not be registered when the DATE ACCEPTED FOR REGISTRATION (Field 17) is more than 12 months later than the DATE OF BIRTH (Field 4A).

01-104   A home birth classification has been designed that will disallow the printing of VERIFICATION LETTER. All home birth passwords will be tied to this classification during Version 4.11 updates.

01-105   The LIST TO BE SENT suboption has been modified to add a display of the incomplete and unsent records prior to the creation of a list.

DEATH RECORD CHANGES:

01-021   A MISSING FILE NUMBER EDITOR suboption has been added.

01-043   A SUPPLEMENTAL DEATH CERIFICATE TRANSMITTAL LISTING suboption has been added. For LRD's participating in the procedure for processing pending death certificates, this listing must accompany the formerly retained pending death certificates when they are sent to OVR.

01-050   A new standard report #CDCUCOD=PENDING DEATH CERTIFICATE AGING LIST has been added to list aging unsent pending records that have not been amended or sent to OVR beyond a user specified number of days, with the default set to 60 days.

01-084   In addition to printing the LFN, LFN ASSIGNMENT may now be used to optionally print the Local Registrar's signature and date of registration.

FETAL DEATH CERTIFICATE SYSTEM OPTION ADDED:

01-081   A new AVSS option has been added that allows fetal death data to be added to the AVSS database by means of the FDC form.

CONFIDENTIAL MORBIDITY REPORT CHANGES:

01-063   The non-reportable disease, TUBERCULIN SKIN TEST POSITIVE (AVSS disease code TSTPOS) has been added to the list for the DISEASE field. Synonyms are TST POSITIVE, PPD, and LTBI.

01-077   An INTERACTIVE CENSUS TRACT suboption has been added.

01-107   Two synonyms have been added to the disease list: HEPATITIS B, PERINATAL and PERINATAL HEPATITIS B, both with the AVSS disease code/mnemonic: HEP-B-PN. Also, if the user enters a "HEP B" case for patients under 2 years, AVSS will prompt:
THIS APPEARS TO BE A PERINATAL CASE OF HEPATITIS B. PLEASE CHECK THE CASE DEFINITION AND CHANGE THE DISEASE TO "HEPATITIS B, PERINATAL", IF NECESSARY.

01-109   Output from the WEEKLY MORBIDITY REPORT suboption and the #CMRWPR has been revised to meet new DHS format requirements.

01-110   SMALLPOX (ICD9 = 50.9) has been added to the list for the DISEASE field.

SYSTEM MAINTENANCE CHANGES:

00-073   Passwords must now have least seven characters, contain both alpha and non-alpha characters, and at least one non-alpha character must be embedded within the password (e.g. REMBR9/11).
